ENTERPRISE & KNOWLEDGE RETRIEVAL // NEBIUS × NVIDIA GLOBAL AI HACKATHON 2026

PAROLE

Autonomous Least-Privilege Governor for AI Agents

KEY THESIS

Eliminating human approval fatigue in deny-by-default agent sandboxes via 3-speed dual-system decision governance.

DENY-BY-DEFAULT SANDBOX

3-SPEED GOVERNANCE

ZERO APPROVAL FATIGUE

Deny-by-Default Sandboxes Break Autonomous Agents

NEBIUS × NVIDIA 2026

THE CORE PROBLEM // THE PERMISSION FATIGUE TRAP

01 THE DILEMMA

Sandboxes like OpenShell protect environments by blocking unauthorized hosts/files, but produce dozens of human confirmation prompts for routine commands.

OVER-RESTRICTED

02 THE FAILURE MODE

Overwhelmed users inevitably rubber-stamp permissions, completely defeating the security perimeter.

HUMAN FATIGUE

03 ALT CATASTROPHE

Permissive agents fall victim to indirect prompt injection, resulting in catastrophic credential exfiltration.

EXFILTRATION RISK

3-Speed Sovereign Architecture Layers

Sub-Millisecond Cache, 100ms Typed Decisions, and Cloud Synthesis

TIER 0

Out-of-Process Trust Boundary & Kernel Hardening

NEBIUS × NVIDIA 2026

An Agent Can Never Grant Permissions to Itself

True Kernel Isolation

NemoClaw runs in an isolated Linux process using Landlock filesystem sandboxing and seccomp syscall filtering on a Nebius VM.

```
$ sandboxing --mode=landlock
$ filtering
--syscall=seccomp
[STATUS: ISOLATED_VM]
```

Immutable Hard Denylists

Cloud metadata endpoints (169.254.169.254), SSH keys (~/.ssh), and credential vaults (~/.aws) are strictly hard-blocked outside the LLM's authority.

```
BLOCK 169.254.169.254
BLOCK ~/.ssh/* & ~/.aws/*
[OVERRIDE: FORBIDDEN]
```

Untrusted Provenance

Taints any action originating from untrusted web or repo text, preventing indirect prompt injection exploits.

```
SRC: web/repo_payload
TAINT_FLAG: ACTIVE
[INJECTION: INTERCEPTED]
```

ADAPTIVE POLICY PROMOTION (THE REFLEX ENGINE)

NEBIUS × NVIDIA 2026

Agents Earn Least-Privilege Permissions at Runtime

THE ESCALATION COLLAPSE CURVE

<5%

100% → <5% IN 20 MINS

Human escalation rate drops from 100% on cold start to <5% after 20 minutes of normal workflow.

STRICT SCOPE TIGHTENING

Replaces broad permission grants with fine-grained CIDR/path rules.

```
- GRANT ALL permissions TO *:*
+ PERMIT 10.0.4.0/24 ON /api/v1/*
```

HOW IT WORKS // REFLEX PIPELINE

01. POLICY SYNTHESIS — Nemotron-Super

Approved actions are synthesized into minimal scoped policy diffs automatically.

02. BOUNDARY TESTING — Nemotron-Ultra

Synthesized policy diffs are stress-tested against security rule boundaries.

03. CACHE PROMOTION — PicoClaw Cache

Validated rules are promoted into PicoClaw's local cache for real-time runtime enforcement.

NEBIUS × NVIDIA 2026

Maximizing H100 Throughput with Cost-Calibrated Reasoning

NEBIUS TOKEN FACTORY & NVIDIA MODEL ORCHESTRATION

01 // PRIMARY REASONER

`nemotron-3-super-120b-a12b`

$0.30 / M tokens

FUNCTIONAL ROLE

Generates minimal policy diffs and impact counterfactuals.

02 // ADVERSARIAL RED-TEAMER

`Nemotron-3-Ultra-550b-a55b`

$1.00 / M tokens

SECURITY GOVERNANCE

Audits diffs for privilege escalation risks.

03 // FAST EDGE FALLBACK

`Nemotron-Nano JSON structured adapter`

ZERO DOWNTIME ADAPTER

HIGH AVAILABILITY GUARANTEE

Guarantees zero downtime if external decision APIs experience waitlist delay.

TIER 1 (~95ms) — 13%

Lightweight speculative evaluation & local guardrails

TIER 2 (~1.9s) — 3%

Full LLM reasoning & fallback security verification

180-Second Live Demo Choreography

NEBIUS × NVIDIA 2026

Proven Defense Against Live Poisoned Repository Injections

00:00–00:30	**01. THE TRAP** Autonomous agent analyzes a repo containing a poisoned README attempting secret exfiltration.
00:30–01:15	**02. THE DEFENSE** Routine actions pass instantly; the malicious payload is flagged by Jev and terminated by NemoClaw seccomp.
01:15–01:55	**03. ADAPTIVE LEARNING** Legitimate API calls are audited by Nemotron, approved, and hot-reloaded into local cache.
01:55–02:30	**04. THE METRICS** Live dashboard displaying the Escalation Collapse Curve and token savings telemetry.
02:30–03:00 THE VERDICT	***"The sandbox never trusts the model that's asking."***

NEBIUS × NVIDIA 2026

Unlocking Enterprise Adoption for Autonomous Agent Fleets

Enterprise Compliance

Auditability Mandate

Solves the SOC2 and ISO27001 auditability mandate for autonomous developer and IT agents.

SOC2 | ISO27001 | DEV & IT AGENTS

Open-Source Blueprint

Native Compatibility

Native compatibility with OpenShell, LangGraph, and Sipeed PicoClaw hardware.

OpenShell | LangGraph | Sipeed PicoClaw

NVIDIA & Nebius Fit

Infrastructure Alignment

Showcases high-efficiency H100 inference on Nebius Cloud and deepens NVIDIA NeMo governance adoption.

Nebius Cloud | H100 GPU | NVIDIA NeMo

The Security Core of Project AEGIS

// 01 . SYSTEM ROLE

Modular Role

Acts as the Autonomous Security & Least-Privilege Governance Layer of Project AEGIS (AxiomOS).

```
> ROLE: GOVERNANCE LAYER
> MODEL: LEAST-PRIVILEGE
> TARGET: AxiomOS CORE
```

// 02 . SQUAD DEPLOYMENT

Engineering Squad

High-velocity 4-person collegiate squad in Mumbai (Lead Architect, Cloud Infra Lead, Edge Systems Builder, Pitch/Video Producer).

- Lead Architect
- Cloud Infra Lead
- Edge Systems Builder
- Pitch/Video Producer
